Screen-by-Screen Scrutiny of UI Inconsistencies Against Standardized UI Components Guide

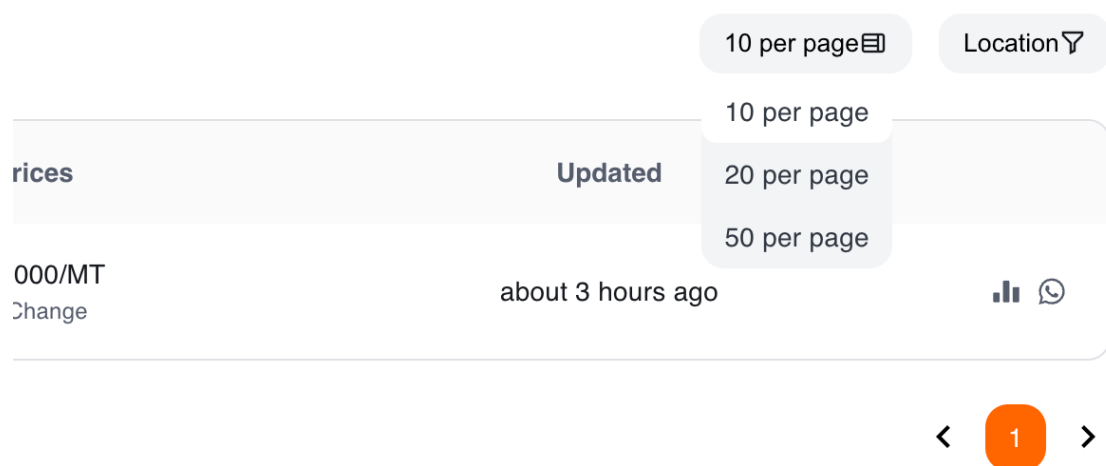

Screen 1: Dropdown & Pagination Issues

Issues Identified:

1. **Dropdown Misalignment** – The dropdown is not perfectly aligned with its trigger button, making it look disconnected.

2. **Inconsistent Spacing Between Items** – The gaps between "10 per page," "20 per page," and "50 per page" are not uniform.

3. **Font Weight Mismatch** – The dropdown text appears heavier than the defined style in the guide.

4. **No Clear Hover or Selected State** – There is no visual indication of which option is currently selected.

5. **Pagination Button Size & Contrast Issue** – The selected page button is highly prominent, but the next/previous buttons are not given enough emphasis.

6. **Misalignment in Dropdown Icon** – The icon inside the button is slightly off-center.
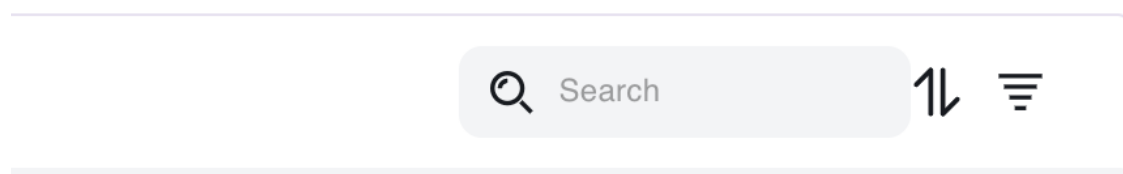

Required Fixes:

• Align dropdown properly with the button.

• Standardize the font weight and size to match the guide.

• Define clear hover and selected states for dropdown items.

• Improve the visual hierarchy of pagination buttons.

Screen 2: Search Box & Filtering UI

Issues Identified:

1. **Search Icon Misalignment** – The magnifying glass icon inside the search field is not centered vertically.

2. **Filter & Sort Icons Not Aligned** – These icons are positioned at different heights, breaking the visual rhythm.

3. **Excessive Padding in Search Box** – The padding is inconsistent compared to other input fields in the guide.

Required Fixes:

• Ensure icons inside input fields are properly centered.

• Align filter and sort icons to match the search bar's vertical positioning.

• Reduce unnecessary padding inside the search field.

Screen 3: Tab Navigation

| Basic	Feature	Brand Details	Standards	Product Descriptions	**Detailed Specifications**	Images	Documents	Quality Tests and Certifications

Issues Identified:

1. **Uneven Spacing Between Tabs** – Some tabs have larger gaps than others, which disrupts visual consistency.

2. **Typography Inconsistencies** – Some tab labels are bold, while others appear lighter.

3. **Hover State Missing** – There is no clear hover indication for inactive tabs.

Required Fixes:

• Maintain equal spacing between all tabs.

• Increase the thickness or contrast of the active tab indicator.

• Standardize typography across all tabs.

• Implement a hover state with a subtle background or underline effect.

Screen 4: Upload Section & Save Button

Add Product   Bulk Upload (CSV)

Basic	Feature	Brand Details	Standards	Product Descriptions	Detailed Specifications	Images	Documents	Quality Tests and Certifications

Upload Product Images *

⬆ Upload
OR
Browse Files 📄

⊕

Save

Issues Identified:

1. **Button Style Inconsistency** – The "Upload" and "Save" buttons follow different styles in terms of padding and shape.

2. **Alignment Issue in Browse Files Link** – The "Browse Files" link is slightly misaligned, creating an unbalanced look.

3. **File Drop Area Positioning** – The outlined file drop box is not properly aligned with the left upload section.
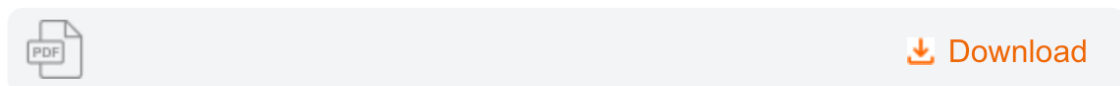

4. **Color Difference in Upload & Save Buttons** – The orange shade used in the "Upload" button is not the same as in the "Save" button.

Required Fixes:

• Standardize button styles and padding.

• Ensure proper alignment of the "Browse Files" link.

• Correct spacing between file upload elements.

• Use a consistent color palette for buttons.

Screen 5: Document Download Section

Uploaded Document*

Issues Identified:

1. **Spacing Between Download Button & Text Field** – The "Download" button is placed too close to the document field.

2. **Misalignment of PDF Icon & Text** – The icon is slightly higher than the text.

3. **Weak Visual Hierarchy** – The download action should stand out more as an interactive element.

Required Fixes:

• Increase spacing between the document field and the download button.

• Align the icon properly with the text.

• Improve the contrast or styling of the download action to make it more noticeable.

Screen 6: Bank Details Form

| General info | Documents details | Billing address | Bank details |

Bank Name*

Beneficiary Name

Account Number

XXXXXXXXXXXX

IFSC Code

Branch Name

Issues Identified:

1. **Input Field Alignment Issues** – Some fields, like "Bank Name" and "Beneficiary Name," are not perfectly centered.

2. **Uneven Label & Input Field Spacing** – Some labels are too close to their respective input fields.

3. **Missing Required (*) Indicators** – Some fields that should be mandatory do not have the red asterisk.

4. **Low Contrast in Input Fields** – The background color of input fields is too light, reducing clarity.

Required Fixes:

• Ensure uniform alignment of all form fields.

• Adjust spacing between labels and inputs for better readability.

• Add required indicators consistently.

• Increase contrast of input field backgrounds for better visibility.

Screen 7: Back Button & Page Title

Issues Identified:

1. **Back Button Floating Too Close to Text** – The back button is not spaced properly in relation to the title.

2. **Font Size & Weight Difference** – The title "Mihir Group" appears bolder than standard headings.

3. **Padding Issue** – The spacing between the back button and text is inconsistent.

Required Fixes:

• Increase spacing between the back button and the title.

• Standardize font size and weight across all headings.

• Maintain consistent padding for button placement.

Screen 8: Category Navigation Bar

Issues Identified:

1. **Inconsistent Spacing Between Category Items** – Some categories are spaced too closely, reducing readability.

2. **Typography Variations** – Some categories have bolder text than others.

3. **Misaligned Arrow Icon** – The left navigation arrow is slightly lower than the category text.

4. **Category Text Cut-Off Issue** – Some category names appear cramped.

Required Fixes:

• Apply equal spacing between all category items.

• Use a uniform font weight for all category text.

• Align the arrow icon properly with the text.

• Ensure category names are fully visible without being cut off.

General UI Issues Across All Screens

• **Spacing & Padding Inconsistencies** – Many elements have irregular padding, leading to an unbalanced design.

• **Typography Variations** – Fonts differ in size, weight, and color across similar components.

• **Alignment Problems** – Several icons, text, and buttons are not properly aligned.

• **Missing Interactive States** – Dropdowns, buttons, and tabs lack proper hover and active states.

• **Button Styling Differences** – Some buttons have icons, some do not. Some are rounded, others are sharp.

• **Lack of Visual Hierarchy** – Important actions like downloads, navigation, and selections do not stand out enough.

Required Global Fixes

1. **Enforce a Consistent Spacing System** – Define strict spacing rules (e.g., 4px, 8px, 12px, 16px) and apply them consistently.

2. **Unify Typography Standards** – Set fixed font sizes, weights, and line heights for all components.

3. **Use a Grid System for Alignment** – Ensure all elements align perfectly using a structured layout.

4. **Standardize Button Styles** – Define clear primary, secondary, and disabled states.

5. **Improve Dropdown & Navigation Styling** – Make selection and hover states more distinct.

6. **Fix Tab Navigation Hierarchy** – Ensure active, hover, and selected states are visually strong.

7. **Utilize Tailwind CSS for Uniformity** – Tailwind's utility classes can enforce spacing, padding, and alignment consistency.
